STORE MAP ADMIN GUIDE

For AJ: invite the team, review their plans and keep the master map right.

YOUR JOB IN ONE MINUTE

1. Give each person a code.
2. They make their own plans and send them to you.
3. You approve the best parts onto the **MASTER MAP** (the real layout).
4. Print it, check it on the floor, lock it.

NOTHING IS EVER LOST

Every change to the master map is saved as a new numbered version. Any old version can be restored with one button.

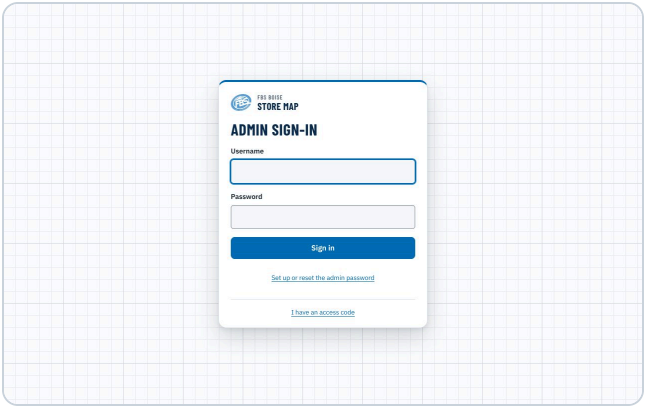

FBS Boise Store Map · Admin Guide · October 2026. Keep this guide to yourself: it explains how access works.

WHAT'S INSIDE

1. Sign in as the admin
2. Invite someone
3. Remove someone
4. Map settings (share, lock)
5. The best way to run a layout project
6. Review a plan someone sent you
7. Compare any two maps
8. Change the master map yourself
9. Go back to an older version
10. The Advisor's numbers
11. Print, PDF or email
12. Keep it safe
13. The 11 rules of a great layout

1. SIGN IN AS THE ADMIN

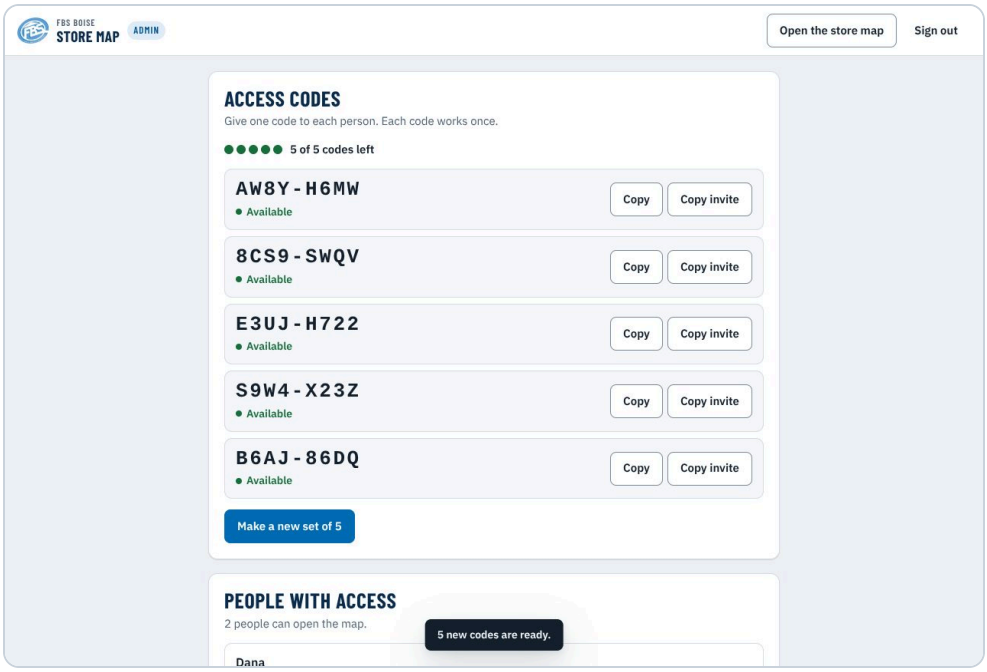

1. Open **franklinmap-boise.com/login?admin=1** (or press **Admin sign-in** at the bottom of the normal sign-in page).
2. Type your **username** and **password**.
3. You land on the map with extra powers: the **Review** mode and the admin items in the account menu (your initial, top right).

> **Forgot your password?** You need a one-time setup code (ask whoever manages the site, or run **npm run setup-code** in the project folder). Then open **franklinmap-boise.com/login?setup=1**, enter the code and choose a new username and password (at least 10 characters). Change your password any time under **Your account** in the dashboard.

2. INVITE SOMEONE

1. Open the dashboard: account menu (top right) → **Admin dashboard**, or go to **franklinmap-boise.com/admin/**.
2. Under **Access codes**, press **Copy invite** next to an *Available* code. It copies a ready-to-send text with the link and the code.
3. Paste it into a text message to **one** person. Each code works once.
4. That code now says *Copied · waiting for them to sign up*, so you don't send it twice. When they sign in it says *Used by* their name.

> There are 5 codes at a time. Need more? **Make a new set of 5** cancels the unused ones and makes 5 new ones. People already signed in keep their access.

3. REMOVE SOMEONE

Under **People with access** you see everyone who used a code, their phone number, when they last visited and how many maps they made.

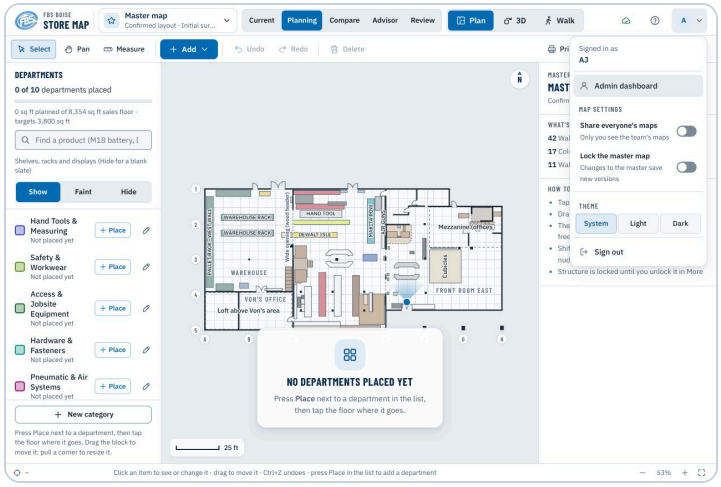

1. Press **Remove** next to the person.
2. Read the confirmation: it says how many maps and proposals will be deleted with them.
3. Confirm. They're signed out right away and need a new code to come back.

> **Careful:** removing someone deletes their maps and plans. If their plan has good ideas, approve them onto the master first.

4. MAP SETTINGS

At the bottom of the dashboard (and in the account menu on the map):

- **Share everyone's maps with the team.** Off: people see only their own maps and the master. On: everyone can open everyone's maps (read-only). Turn it on when you want people to learn from each other.
- **Lock the master map.** While locked, nobody can change the master, you included. People can still send you plans. Lock it once the layout is final.

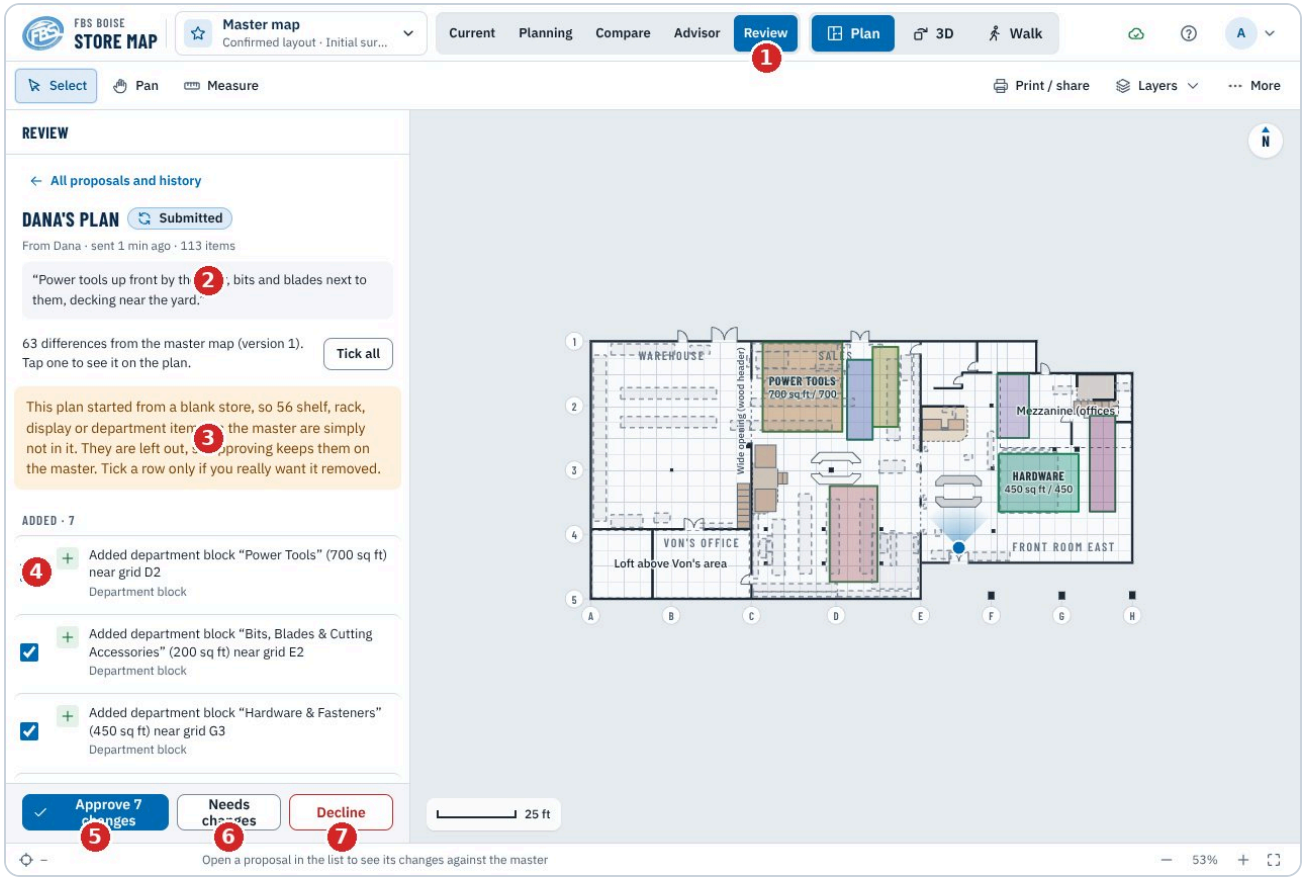

5. THE BEST WAY TO RUN A LAYOUT PROJECT

Follow these steps in order. It keeps everyone working from the same truth and ends with a layout you've checked on the real floor.

1. **Make sure the master map matches the real building.** Look at **Current** and walk the store. Walls, doors and columns wrong? Fix them first (see step 8). Every plan is built on these.
2. **Invite the team** (one code each). Tell them to read the Planning Guide.
3. **Everyone starts from the empty store** and places every department. They fix the red warnings and check with the Advisor until no HIGH items are left.
4. **They send you their plans** with a note explaining their thinking.
5. **You review each one** (next page). Use **Compare** to put two plans side by side. Approve the best parts; ask for changes on the rest.
6. **Print the master** and walk the floor with it and a tape measure. Fix what doesn't fit.
7. **Lock the master** when it's final. Unlock it when the next change comes.

> **Tip:** give people a deadline and a goal (“make the front of the store sell more power tools”). Plans get better when everyone is solving the same problem.

6. REVIEW A PLAN SOMEONE SENT YOU

1 **Review** mode (key 5) lists every plan sent to you. Use the filter to see open, approved, declined...

2 Their **note**: why they made the changes.

3 A **yellow box** appears when the plan started from the empty store: the master's shelves that simply aren't in their plan are left out, so approving **keeps them**.

4 Every **difference**, in plain words. Tap one to see it on the map (before and after). Untick anything you don't want.

5 **Approve** puts the ticked changes on the master (as a new version).

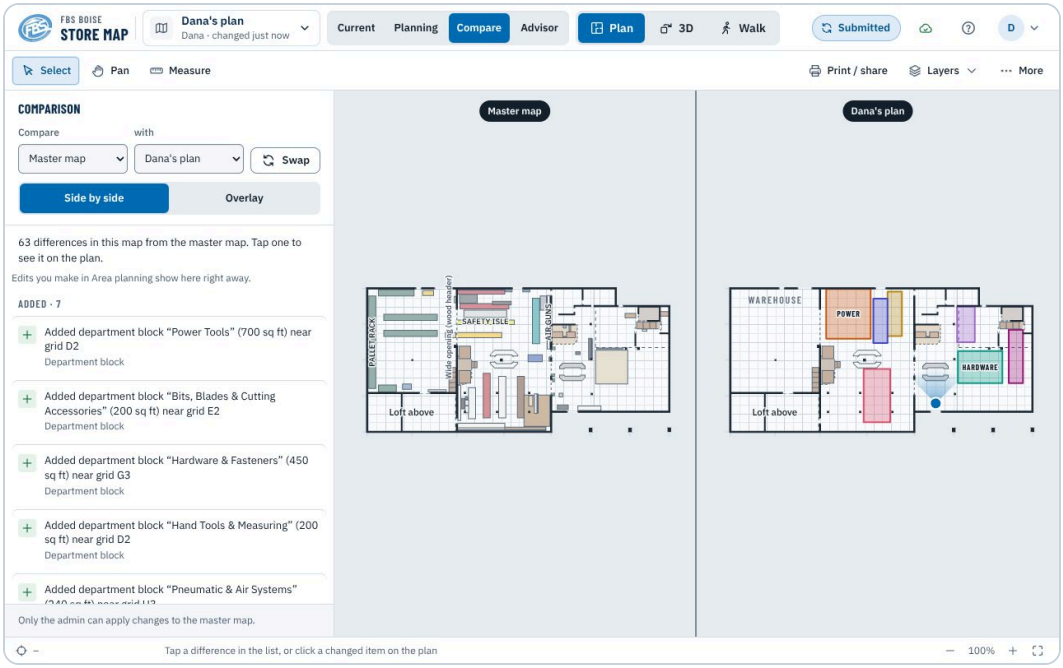

6 **Needs changes** sends it back with your note; they can fix it and send it again.

7 **Decline** closes it, with a note.

> Always write a short note, even when you approve. People learn what you're looking for, and the next plans get better.

7. COMPARE ANY TWO MAPS

Press **Compare**, pick any two maps (the master, yours, or anyone's), and see them **Side by side** or as an **Overlay**. As the admin you can press **Apply** on a single line, or **Apply all**, to put those changes on the master. When the plan started from the empty store, **Apply all** leaves the master's shelves alone (a yellow note says so), so they're never wiped by accident.

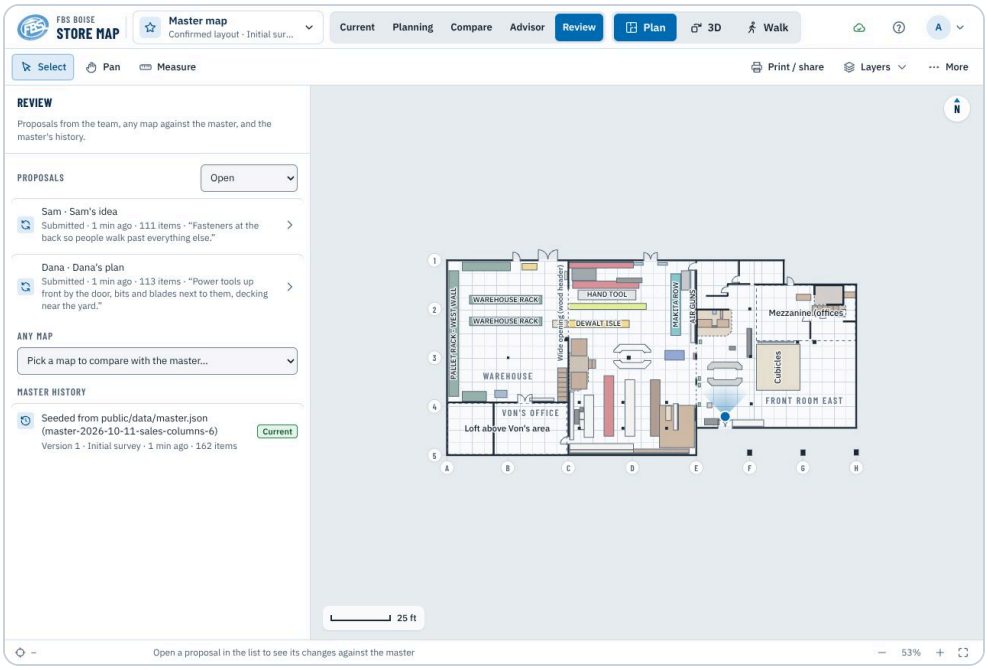

8. CHANGE THE MASTER MAP YOURSELF

Open the **Master map** and press **Planning**. You can move, add and delete anything, like on your own map. A message reminds you that **every change saves a new master version**. To move walls, doors or columns: **More** → **Structure locked** to unlock, then lock again.

9. GO BACK TO AN OLDER VERSION

1. Press **Review**. Scroll to **Master history**: every version, who made it and when.
2. Open a version to see how it differs from today's master.
3. Press **Restore** to make it the master again. This saves a **new** version, so nothing is deleted and you can always undo it the same way.

10. THE ADVISOR'S NUMBERS

The Advisor's rules use numbers (how wide a main aisle must be, which departments go together, how far bulky goods may be from the yard...). They're assumptions. As the admin you can change them under **Assumptions and settings** at the bottom of the **Advisor** panel, and save them for everyone. Change one number at a time and see how the scores move.

11. PRINT, PDF OR EMAIL

Press **Print / share** (top right), or on a phone **More** → **Print, PDF or email**. You get one letter-size page with the map, the departments and their sizes: **Download PDF**, **Print**, or **Email or share**. It prints what's on screen: open **Current** to print the master as it is today.

12. KEEP IT SAFE

- **Codes are like keys.** Send each one to one person by text. Never post them in a group chat or on a wall.
- **Remove people who leave.** It signs them out right away.
- People sign in with a code, not a password. Their phone numbers are only visible to you, in the dashboard.
- The site has two secret settings in Cloudflare called **PEPPER** and **PHONE_KEY**. **Never change or delete them**: every saved phone number, password and code depends on them.
- If the map ever says *"Editing isn't switched on yet"*, the site is still being set up: press **Check again** after a minute.

13. THE 11 RULES OF A GREAT LAYOUT

The same rules the Advisor checks, and what to look for when you review a plan.

Leave room inside the front door	Keep a few open feet just inside the door. People slow down there before they pick a direction.
Put a strong department on the right	Most people turn right after they walk in. The right-hand wall is the most-seen wall in the store.
Put the “must-have” department at the back	Departments people come in for (Hardware & Fasteners) pull them past everything else.
Keep pricey and easy-to-steal items in sight	High-margin and theft-prone departments should be visible from the sales desks and the door.
Bulky stuff near the yard	Heavy, bulky stock (access equipment, decking, pellets) goes near the yard and warehouse doors.
Put related departments together	Things bought together sit together: Bits & Blades next to Power Tools, Paint next to Decking.
Make aisles wide enough	Aisles at least 4 ft, main aisles at least 6 ft, and never narrower than 36 inches (ADA).
No bottlenecks	No narrow spots on the main paths between the front door, the sales desks, will call and the yard doors.
Keep doors and exits clear	Nothing in front of a door, an opening or an exit.
Use quiet corners wisely	Corners far from the main paths get little traffic. Put “must-have” or impulse items there, not pricey ones.
Hit the target sizes	Each department should be close to its target square feet (the list shows it, and turns green when it's right).

WHEN YOU REVIEW, ASK

- Are all departments placed, with no red warnings, and close to their target sizes?
- Can a customer see the key departments from the front door?
- Is the path from the door to the desks, will call and the yard wide and simple?
- Does the note explain *why*? A good reason beats a high score.
